luxeco

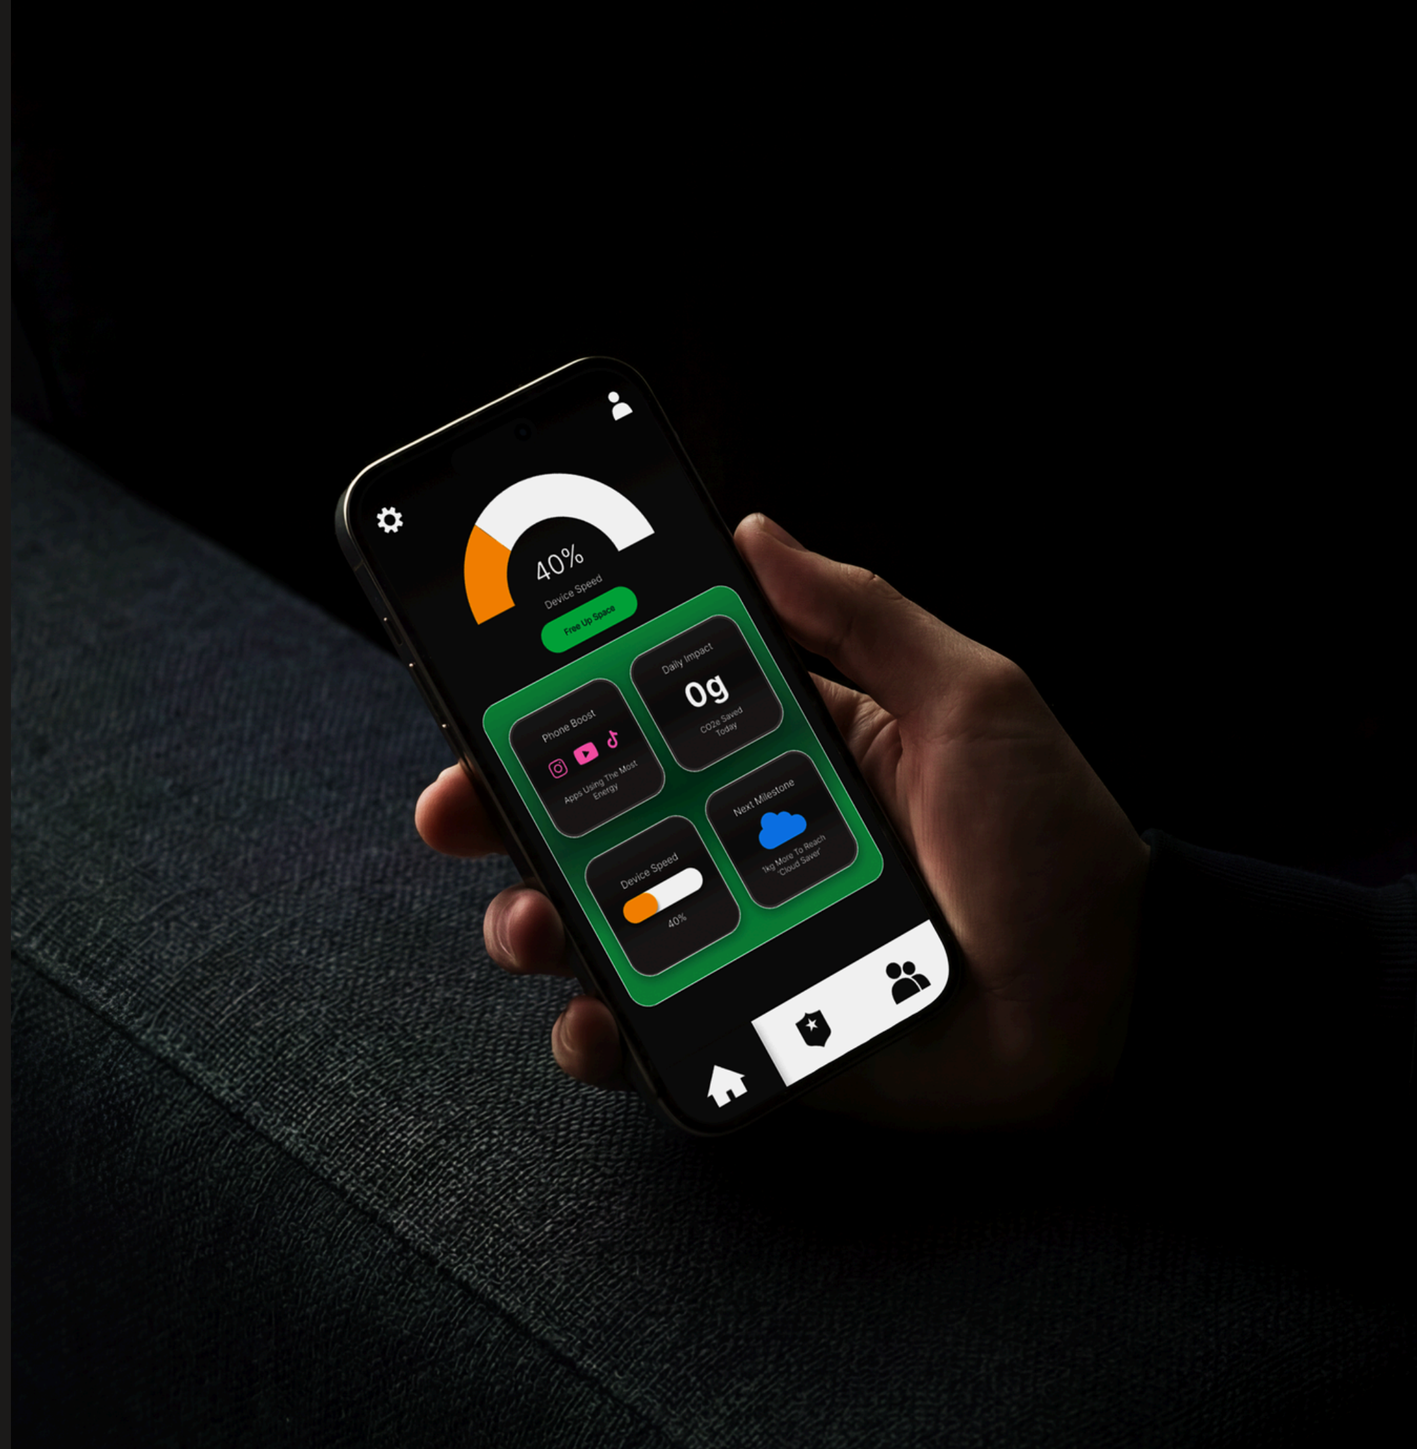

for cleaner devices & a greener planet

@2026, Priscilla Yangi

The Purpose

As consumers, we frequently utilise many applications without considering the emissions that the programmes produce.

Finding ways to better evaluate carbon footprints and get greater insight into lowering energy usage can contribute to a greener planet

HMW Statement

The user is loading the application for the first time to track their energy consumption across different apps so that they can understand how to manage their carbon footprint and discover more insight on reducing energy consumption.

Starting Problem

How might we help users visualise their digital activity and manage their energy consumption and carbon footprint across various applications to reduce both their environmental impact and device clutter?

Problem Statement

Journey Map

Julie

First-time user to application. Wants to learn how to manage energy consumption and carbon footprint, as her phone experiences performance issues and battery drain. The app serves primarily as a phone cleaner and optimizer.

Title	Discover	Onboarding	Track	Review
Description	The user searches for an app to fix her battery drain.	This is the user's first interaction with the app. The user is introduced to the app's mechanics and what information the app will detail.	The user will be at a home page which showcases different parameters of energy consumption. Information on how to help lessen the amounts of energy consumption.	The user notices their phone is faster through an overview of how much has been cleaned and optimised. Further suggestions providing other solutions to other issues the user may encounter.
Touchpoints	App Store (searching for "Battery Saver").	Privacy toggles and hint cards that detail the main structure of the app and where to allocate more resources to help with management.	Main dashboard. Tracker card list of certain apps' energy consumption usage.	Impact completion screen. Push Notification: e.g., "You saved 20% battery today!"
Actions	Downloads app to save battery life and to clean phone.	Granting API permissions. Viewing onboarding informative tutorial cards. Swipe/Click parameters for back and next during tutorial. Start → Onboarding information → Next → Application Home	Taps "Optimise" on high-drain apps. Deletes unnecessary cached files on phone.	Checks battery health stats Realises they have also saved (X amount) of CO2.
Oppurtunities	Framing the app as a "Performance Booster" in the App Store. Advertising application on different apps.	Inclusion of Audio or a Video to showcase for users to visually see the mechanics in real-time	Add a "One-Tap Clean" button. (Heuristics)	Use "Battery Health" as the primary reward. Include more information about the impact certain apps cause due to carbon emissions.

Journey Map

Luke

Tech-savvy eco-conscious individual who wants to reduce their environmental impact (energy consumption and carbon footprint) without drastically changing their digital lifestyle.

Title	Discover	Onboarding	Track	Review
Description	The user learns about their digital footprint via a social ad and downloads the app.	This is the user's first interaction with the app. The user is introduced to the app's mechanics and what information the app will detail.	The user identifies high-energy apps and takes micro-actions.	The user sees the results of their actions and sets new goals. A UI badge is given to the user.
Touchpoints	Instagram Ad. App Store.	Privacy toggles and hint cards that detail the main structure of the app and where to allocate more resources to help with management.	Main dashboard. Tracker card list of certain apps' energy consumption usage. UI Badges.	Completion screen. Impact Report (Ui Badge) Share impact report sheet available.
Actions	Clicks "Download" Opens app for the first time Reads the value proposition.	Granting API permissions. Viewing onboarding informative tutorial cards. Swipe/Click parameters for back and next during tutorial. Ability to skip tutorial. Start → Onboarding information → Next → Application Home	Monitors live energy usage Toggles "Eco-Mode" for high-drain apps Deletes unnecessary cached files on phone.	Reviews CO_2 savings. Unlocks new badge. Shares progress with friends and family.
Oppurtunities		Inclusion of email to quickly log in and save data.	Push notifications when an app's background usage spikes unexpectedly.	

User Story

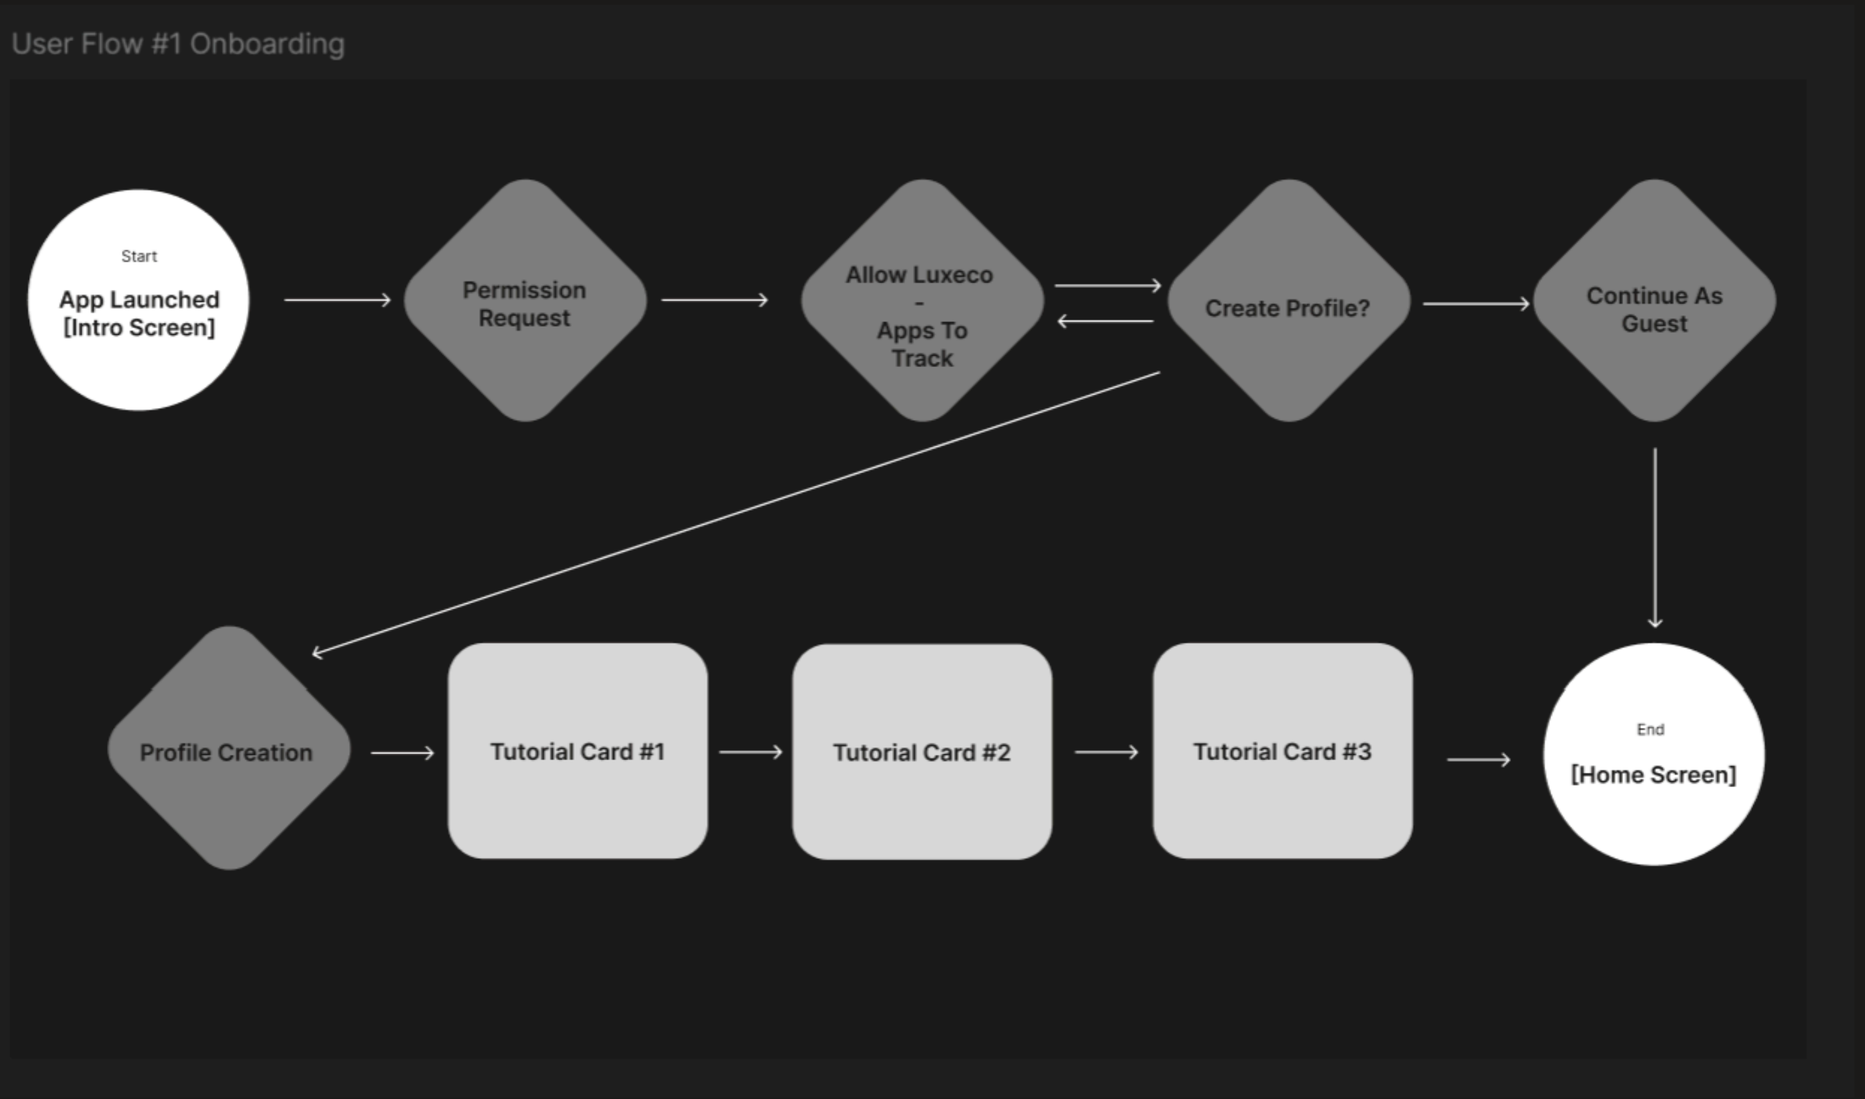

Onboarding

As a smartphone user I want to be able to set up the app so I can use it for the first time.

User Flow

Screen Interaction Flows

Flow #1 Onboarding

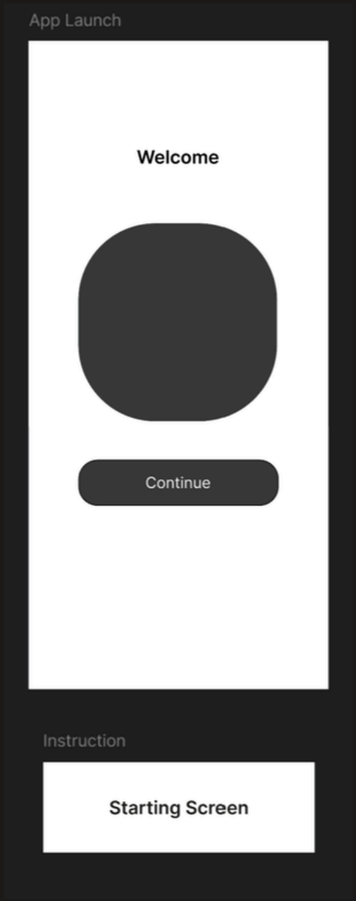

Screen Interaction Flows

Prototype Walkthrough

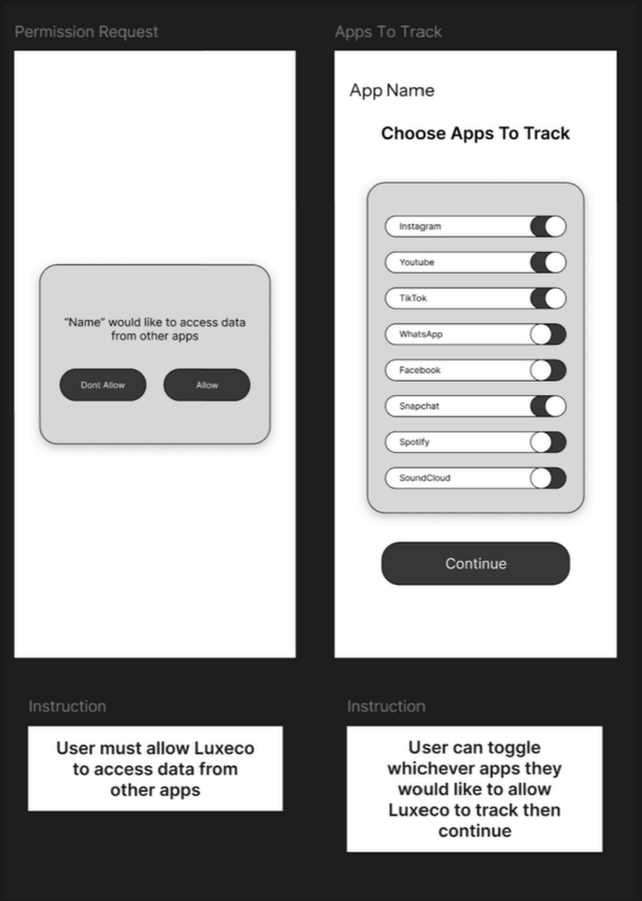

Onboarding

App Launch

Welcomes the user into the application, especially since this user is a first-time user.

Key Screens

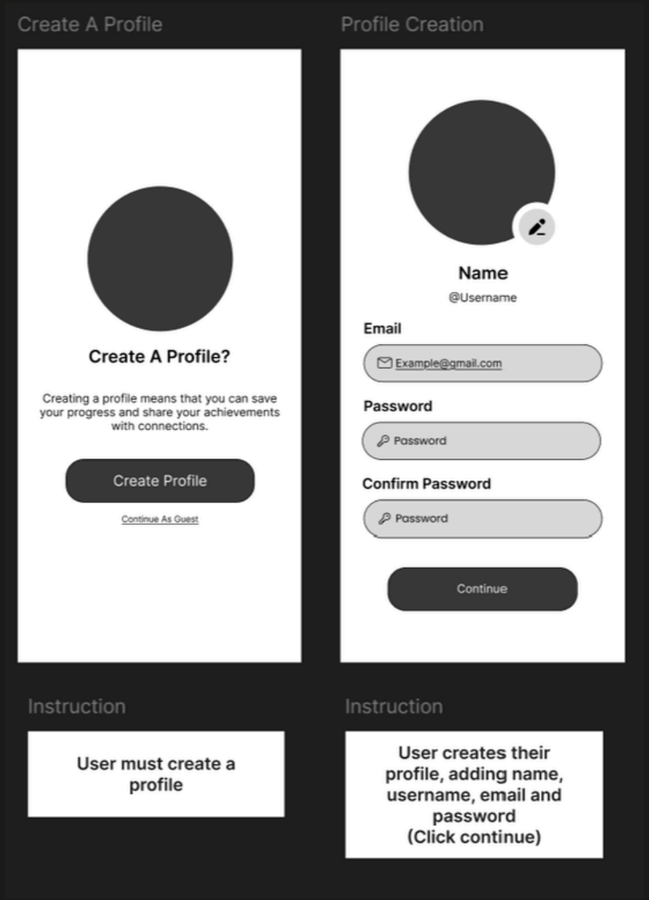

Permission Request Apps To Track

It is important for the app to detail straightaway what the application will need in order to function.

Prototype Walkthrough

Onboarding

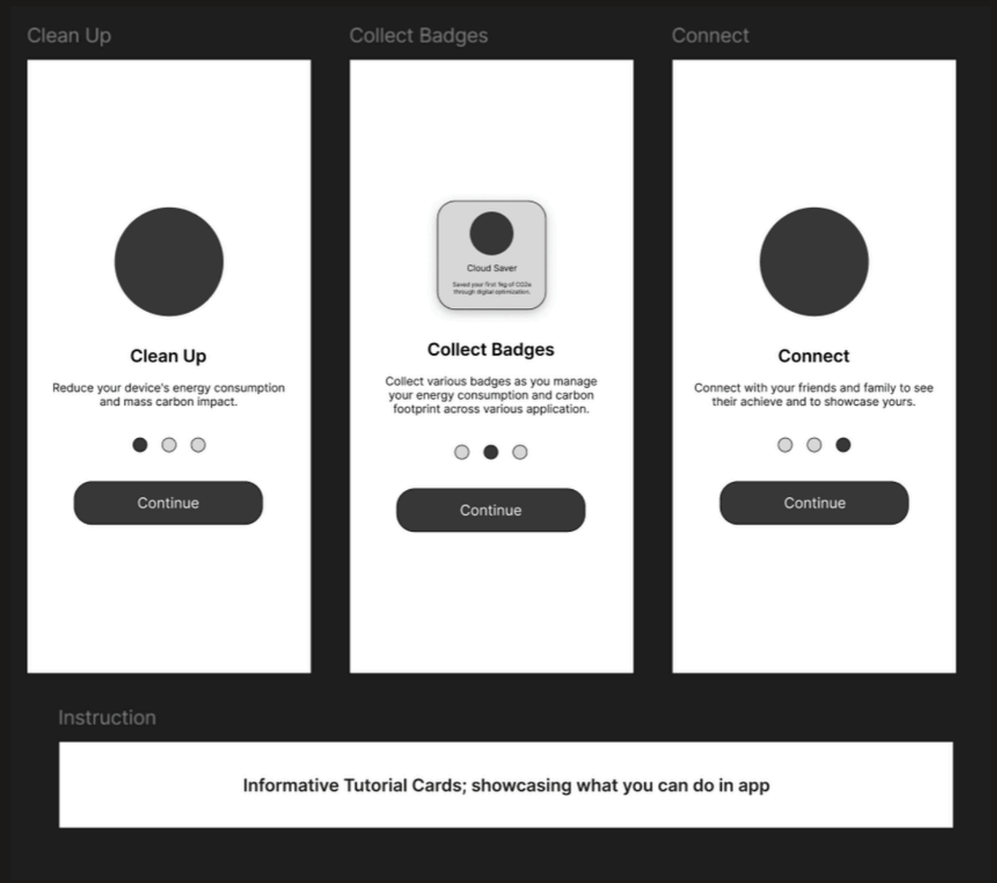

Key Screens

Create A Profile
Profile Creation

Adds more interactability for the user. Also, it will make the user more likely to come back to the app, considering they now have an account.

Onboarding

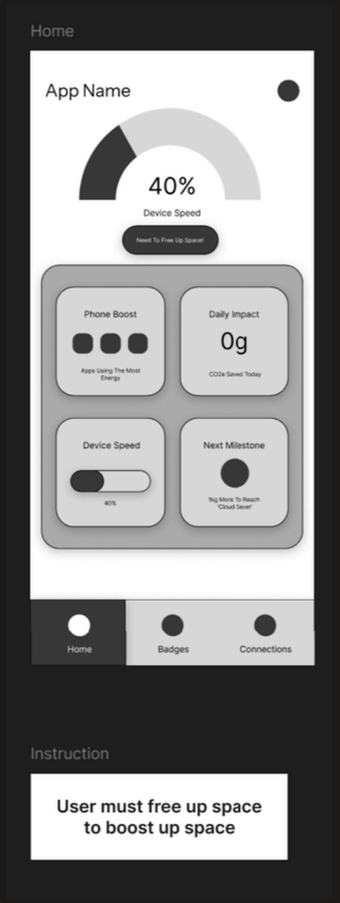

Key Screens

Tutorial Cards

Nice way to inform and introduce a first-time user at the very start of the journey.

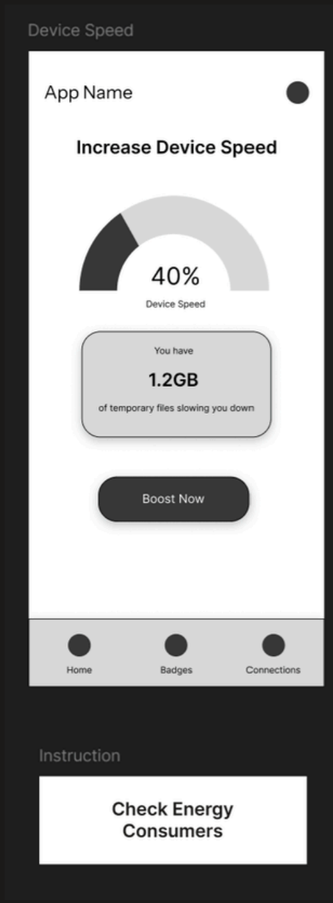

Prototype Walkthrough

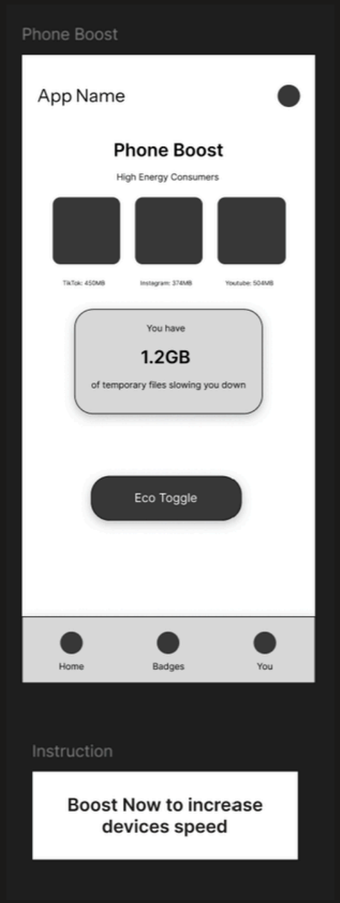

Core Features (App Tracking)

Home

Showcasing 4 cards as its simple design and less clutter.

Key Screens

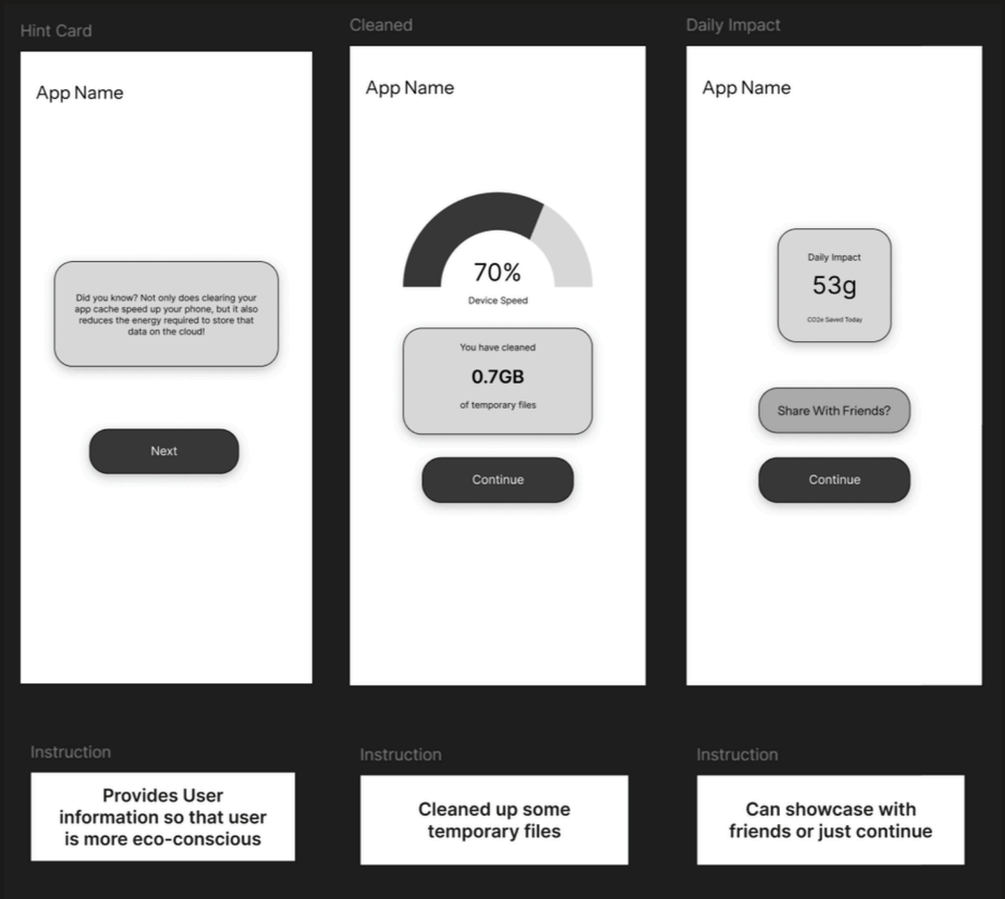

Device Speed
Phone Boost

Reused card design for familiarity.

Showcases the user how many GB of temp files is slowing down the users phone.

Prototype Walkthrough

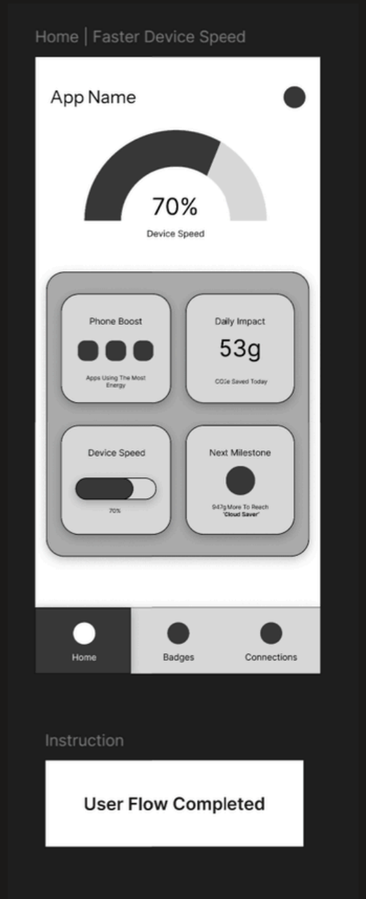

Core Features (App Tracking)

Hint Card
Cleaned
Daily Impact

Minimal but provides enough information for the user to grasp.

Key Screens

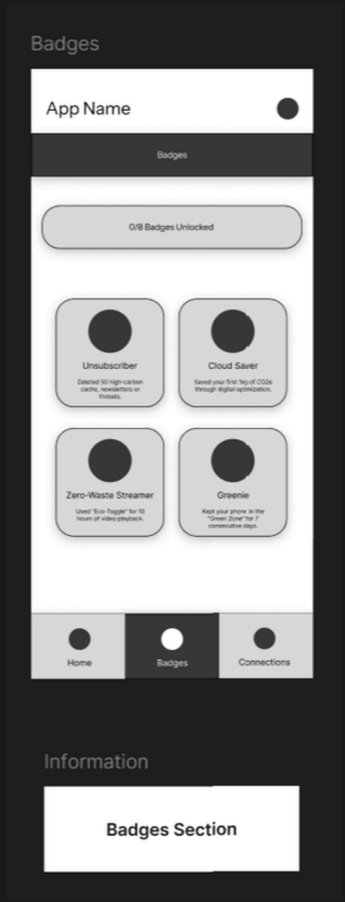

End Screen

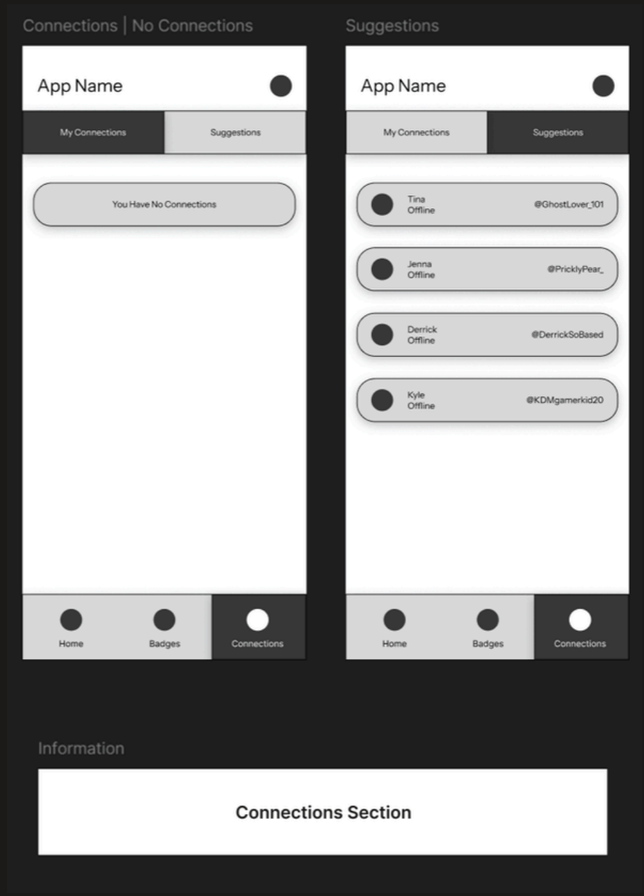

Updated device speed now shown.

Prototype Walkthrough

Core Features (App Tracking)

Key Screens

Bonus Screens (Badges & Connections)

Adding connections & badges gets the user to be more motivated to continue clearing up device clutter, which will benefit emissions.

Usability Testing Finding

Tester 1.

User found text and certain buttons too small. They found it quite hard to read important text that will bring the user further in their journey to being eco-conscious.

Usability Testing Finding

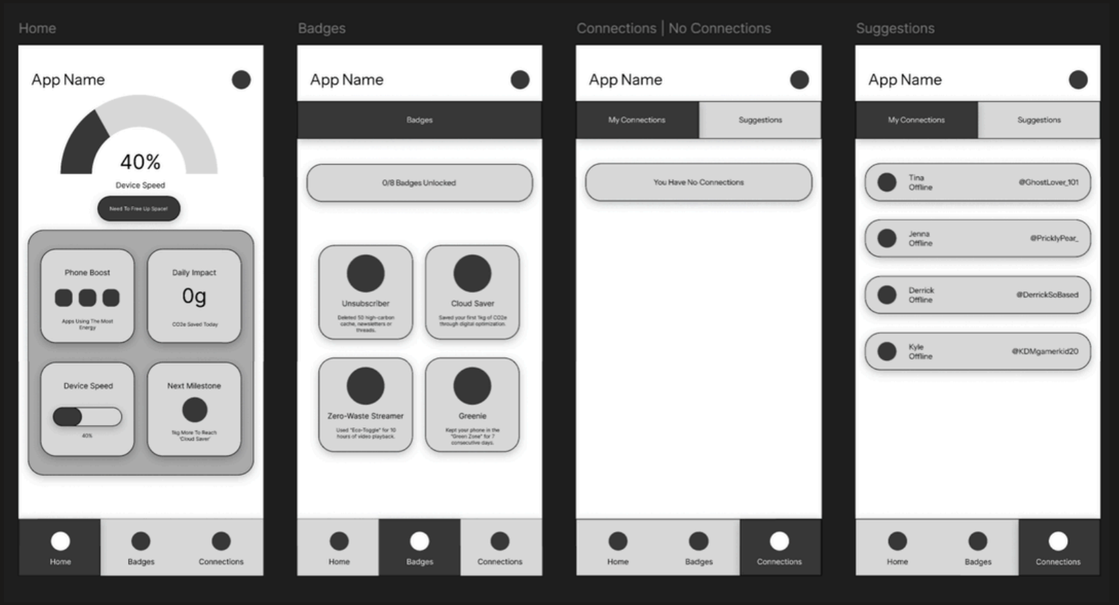

Tester 2.

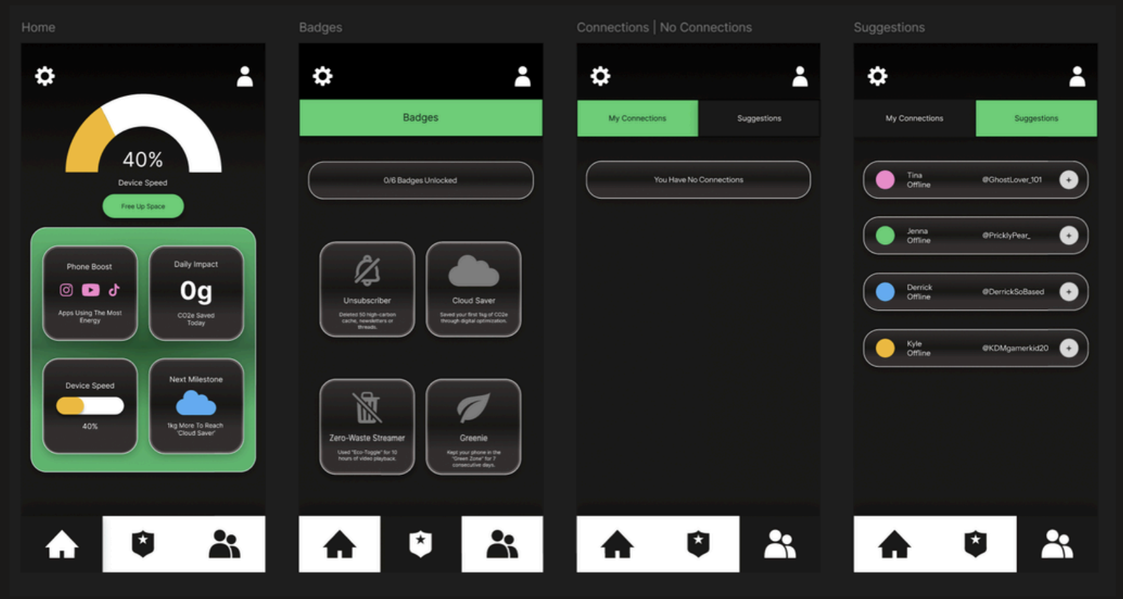

User mentioned that there was not much back buttons to go back to certain screens.

Iterations

Iteration 1.

Removed the App Name and added an option for profile and settings

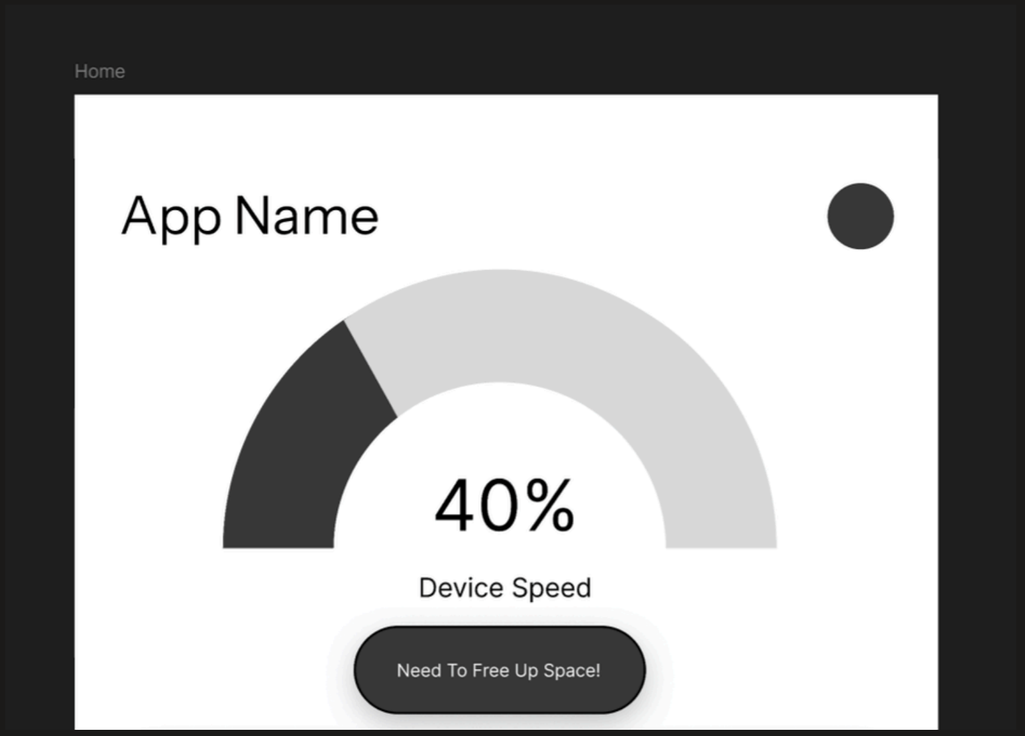

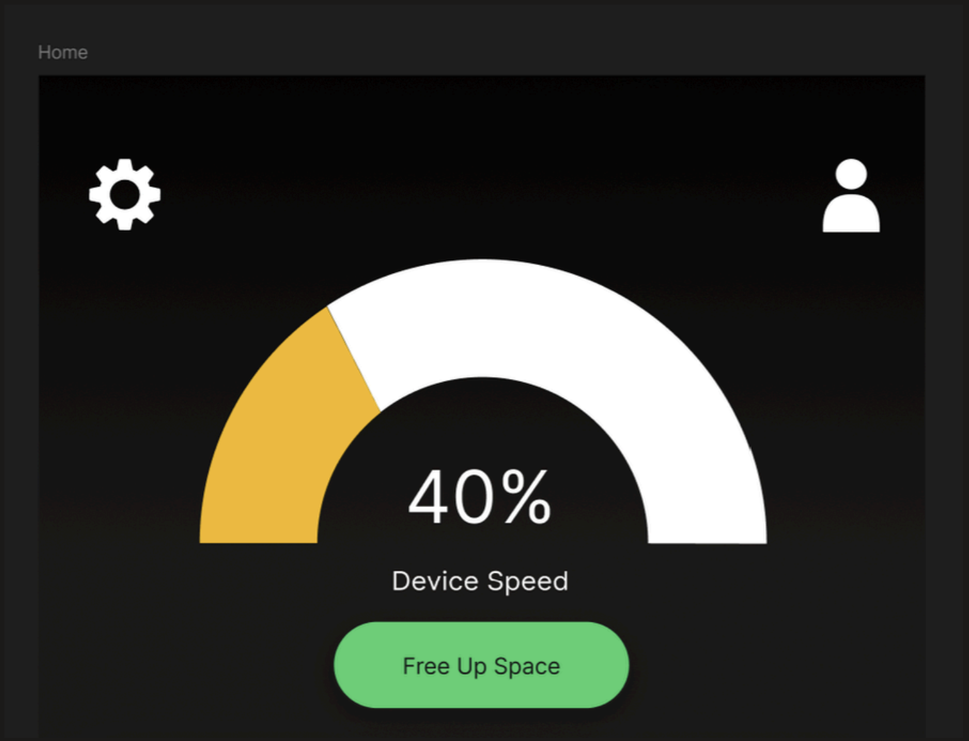

Iterations

Iteration 2.

Changed font sizing on certain elements, as it was too small for users to read

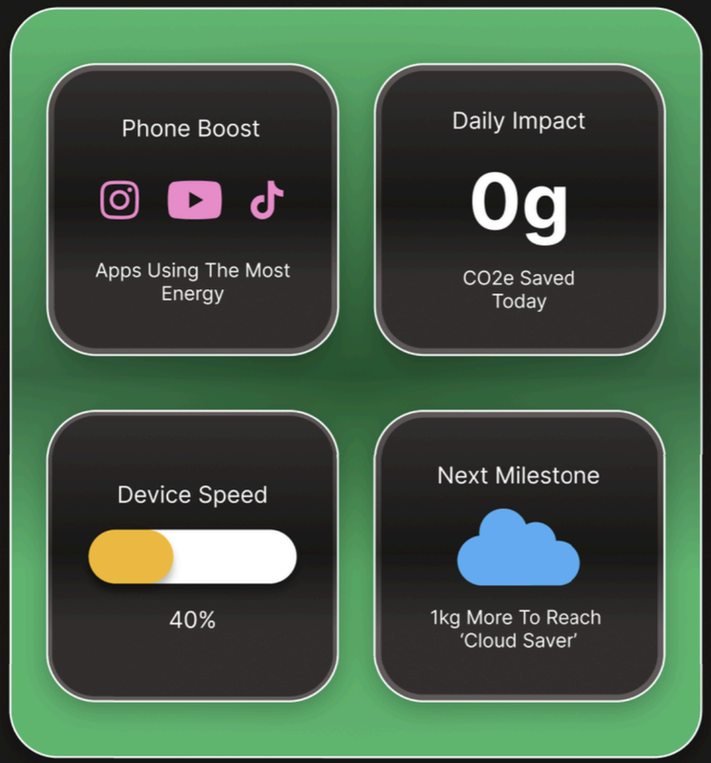

Iterations

Iteration 2.

Changed font sizing on certain elements, as it was too small for users to read

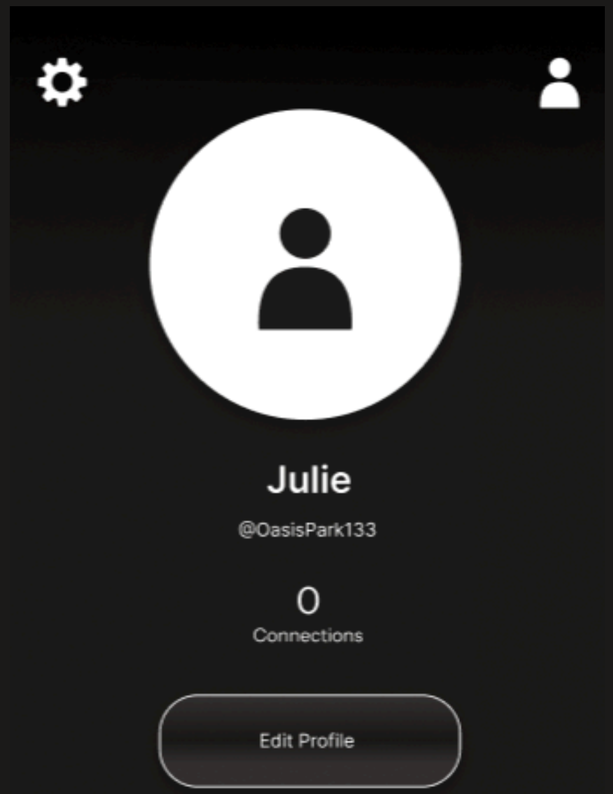

Iterations

Iteration 3.

User should be able to check out their profile, incase they want to adjust settings
